Video editing, or video remixing is the process of taking a video recording and editing it to achieve an end result that is not the original recording. Video editing includes all the procedures performed by an editor or post-production studio that are needed to produce a video (video) recording from a source recording or television program. A great majority of recordings produced are a result of the skill of a video editor, and the amount of creativity involved in some productions can be quite substantial. In the modern world, computer-based video editing software has replaced traditional methods of video editing. The most important requirement for video editing is the ability to manage video, images, and audio that are either stored in file formats or delivered as streams or data packets. A powerful tool for managing video and sound in the computer environment is the media player software. Like other tools in the video editing software, the media player plays media files, or media streams. This tutorial will teach you how to use Adobe Premiere Pro CS6 video editing software in four easy steps. By the end of this tutorial, you will have learned how to convert a video into a format that can be exported to the Web as an online video. Step 1: Open Adobe Premiere Pro CS6. Start Adobe Premiere Pro CS6. Step 2: Choose your video. It is important to understand that while the media player is a vital part of Premiere, the video editing tools are not. The media player only plays the file, or stream of the media, for you to add video and audio effects to. Premiere has some other wonderful tools, like effects, transitions, and motion graphic templates that can be used to create professional looking videos and filmstrips. Step 3: Import Media. Once you have chosen your video, you must import it into the software. This can be done in two ways: by clicking the Import button on the main menu bar, or by clicking the Import Media button at the bottom of the player. To import your media, click Import Media. A window will appear on the right hand side of the screen. Click the Open button, then browse to the location of your media file. Step 4: Adjust Audio and Video. The next step is to adjust the audio and video of the file. There are five controls to adjust: • Video (V) – This is the video adjustment, which gives the overall look to the video, including whether the footage is normal quality or high

Architecture AutoCAD Architecture, and the associated Autodesk Architecture Certification Program, allow architects and designers to create 2D and 3D drawings for construction projects. These drawings are often reviewed by professionals and then presented to client for approval. As a result, these programs were developed to allow users to make architectural drawings quickly, easily and with detail appropriate for their particular work. AutoCAD Architecture includes the ability to: make 2D and 3D drawings with a variety of styles. apply "architectural" techniques to create parametric, 3D, multi-level drawings. import and export building information models. I took some time to really enjoy the sights, sounds, and eats of Cleveland. It was a great trip. While in Cleveland, I had the opportunity to sit down with Kellie O'Brien, newly appointed Marketing Director at Pottery Barn Kids. I love talking to Kellie because she has an incredible passion for what she does, and she is very personable. We chatted about everything from her background as a marketer and retailer, to what she loves most about her new role. Kellie talked about the marketing team that she has at Pottery Barn Kids. She told me that they are a little different than the typical department with multiple departments. They are just the same size department with a specific talent. Kellie works with all of the departments to identify what it is that she wants to help create and implement. "We love our team. They're so much fun to work with. I'm really lucky that my team gets to know all of our customers," Kellie said. I was so impressed with Kellie. She brought such a positive, engaging energy to the table. She really believes in Pottery Barn Kids and loves it. It was great to talk to someone who is excited about what they do every day. I would love to have someone like Kellie working for me. She is one of those people that you want to help because you know that they will be working hard to make the company and their products great. I was very impressed with Kellie and excited to learn more about her. I would love to hear from you. Leave a comment about your favorite department at your place of work.
