Contents AutoCAD gives users the ability to draft, view, and modify design drawings. An AutoCAD drawing consists of two types of objects: blocks and components. Blocks are 2D objects that can be modified using a block styles window, such as walls, ceilings, or doors. Components are 3D models that are attached to blocks in a drawing. Autodesk offers AutoCAD LT, which requires less storage space and less computing power than AutoCAD. LT is limited to two-dimensional (2D) drafting. The only feature offered in LT is the ability to draw line segments, or linework, and associate them with blocks and components. AutoCAD Enterprise is an upgrade to AutoCAD and provides additional features. Enterprise is limited to the block-based objects of AutoCAD. AutoCAD can be used as an architectural design and documentation tool to help in the construction and design process. The Discovery Channel has officially announced the name of the big-budget TV series they're developing with Netflix that will have four different seasons. And the acronym "3D" isn't in that title anywhere. Instead, "The Expanse" will be telling a multi-directional story of what happens when one small group of people go to the stars. Specifically, the first season will be set in the 22nd century. The series will be set 250 years into the future and it will be directed by Italian filmmaker Paolo Virzi, best known for his cinematography work on The Devil's Kiss, a film about a missing ship that spans hundreds of years. This is the first time Netflix has teamed with a TV network for a TV series. Over the past three years the streaming service has been busy developing original series, including some with heavy sci-fi elements like Narcos, Altered Carbon, and Black Mirror. "The Expanse" is a product of the Syfy channel and the same network is producing the series. For the past five years, Syfy has partnered with Warner Horizon Television to create original sci-fi/fantasy shows, including The Expanse, 12 Monkeys, and Krypton. Update: The first season of the series will reportedly be 10 episodes long and will premiere this year. "The story starts 250 years from now. It's set in the 22nd century," Virzi said in a statement. "It's set in the asteroid belt between the planets Mars and Jupiter. It's a very cold place. This whole society is made up of refugees. They've escaped from Earth, because the Earth is destroying itself. It's a very brutal story. It's an extremely political story. It's a story about humanity. It's a science-fiction story but it's not a fantasy. It's a science-fiction story for the real world." "The Expanse" is one of several projects in development at Syfy. There's also recently announced series like Deadly Class, Snowfall, and Krypton, as well as a Halo TV series. Although a French attack would have fallen at Waterloo, the high casualty rate among the Spanish, and their desire to avoid this, have lead some to conclude
