PrivacyQ: Are there any Negative consequences to using CSS instead of HTML or Javascript? I'm new to web dev and having just dabbled with CSS. My question is this: I'm aware of the negative effects of using Javascript (asynchronous script execution, code can be obfuscated and abused etc) and HTML (considerable slower rendering times). Is there any negative effect to using CSS instead of HTML or Javascript? A: Basically, you could say that using CSS has the least negative consequences because it is always valid. While HTML is valid, it is interpreted by browsers differently so it has various negative consequences that you should be aware of. In my experience, the only thing I've found is that it is easier to make changes in CSS, but the CSS is often not as smart as HTML for applications. A: Sure there are. See: The point being that: Writing CSS is harder than writing HTML. Writing CSS is non-standard. This means that any user of your site will need to have a specific CSS engine to see your site (or possibly have a specific CSS engine included with their browser). A: I don't see a negative consequence to the use of CSS alone. You could potentially use it more than necessary with some HTML pages, but that's a good thing as it'll improve the speed of the page (this is assuming the CSS is well written, which is what will help it be faster) Q: Class extending a library How can I extend a library in Java? What are the steps to take to extend a Java class that is inside the JRE? A: You can't easily. A library is a chunk of code. It has no interfaces, no constructors, no fields, no methods, no static code, no extension points, nothing that you can extend. You can do this, though: (1) Create a class (such as) MyTestClass.java

### What's New in the NeoDownloader Lite?

NeoDownloader Lite is a lightweight application whose purpose is to help you download multiple pictures, videos, and audio files from your preferred websites. It boasts a clean and straightforward layout that gives you the possibility to select between different preset projects (e.g. fine art, photography, fantasy, celebrities, wallpapers) or start a new one by specifying the URL and title. What's more, the program offers support for password-protected websites, and lets you download single or multiple galleries, grab all pictures from the entire website, or download from a single page only. NeoDownloader Lite lets you pick the saving directory, limit the scan depth to a user-defined value, ignore the homepage, scan the linked pages from other websites, and filter the results by file extensions (JPEG, GIF, PNG, TIFF, BMP, ICO), audio or video files, as well as user-defined file extensions. Other important options worth mentioning are represented by the possibility to create a list with URLs to be ignored during the scanning process, and apply size filters (download items smaller or larger than a given value and automatically delete the downloaded pictures that have a specific size). The tool allows you to create and run multiple projects at the same time, pause or delete them, find active projects, preview the images, create slideshows, as well as set the selected item as your wallpaper. items from the specified URL. It offers very good downloading speed and output results, without stressing up the CPU and memory. Although it may seem more appropriate to experienced users, rookies could configure it with minimum effort, thanks to its intuitive interface and comprehensive help file....

Mages and Daemons download The whole world lies within the power of a mage. That is why there is no greater temptation to a mage than to use the powers of the universe for evil, and this temptation is particularly strong in some of the political systems we have seen throughout history. When an inexperienced mage seeks power, he naturally chooses those who think as he does and who therefore make it easy for him to obtain his goal. This is especially true in the Game of
