Steps to learn Photoshop from beginner to expert Before jumping into Photoshop, take a few steps to get a more complete understanding of how Photoshop actually works. By getting a grasp on some fundamental concepts, you'll improve your overall knowledge of the program. In turn, this will help you master it and make sure you've got it down. The workflow and keyboard shortcuts The first step in learning Photoshop is to understand the workflow of the program. If you're familiar with graphic design, you'll likely be familiar with a work flow that is similar to that used in print design. In this section, you'll learn Photoshop's workflow, and how to get a general understanding of the process. A workflow in Photoshop is the process of creating, editing, saving, and managing images. By understanding the workflow of the program and how it works, you can quickly work on any project in Photoshop and make the most out of each image. To create a new file in Photoshop, click the File menu, and then click New. In the Save for Web & Devices window, select the final destination of your image. When you're finished, click OK. To save your image, click the File menu, and then click Save. In the Save window that appears, click Save As. If you have a preference as to the file name and location you want to save your image, check those preferences before clicking Save. After you save the image, it should be ready to open on any device capable of displaying it. To open an image in Photoshop, open it from either the File menu or by pressing CTRL + I. To edit an image in Photoshop, you will want to right-click the layer(s) in the Layers panel. By doing so, you are able to bring up a menu that will let you choose specific options for that layer. TIP: In this instance, "Layer" refers to an individual layer in an image, not to the image's selection of pixels. To edit an individual layer, you can perform edits by clicking on the actual pixels, or you can open the Layers panel. If you do not have the Layers panel open, you can click the View menu and select View Layers, or you can use the keyboard shortcut F. From the Layers panel, you can click the individual layer and click the edit button in the lower-right corner to open the Edit menu. From there, you can

Q: Displaying different types of ticks in a graph I would like to know if it's possible to set the ticks of a bar chart or a matplotlib.pyplot graph to display certain values but not others, and not to break the graph into parts of the ticks (I know you can use different tick types). Here is a graph of a bar chart I would like to have with ticks displaying 2 and 4, but not 4 and 6: In this case, I would like to display ticks 2 and 4 but not ticks 4 and 6. I have tried using ticks="", but it does not work. A: As first approach I recommend using pyplot.bar with xticks/yticks parameter import matplotlib.pyplot as plt import numpy as np data = np.random.randint(0,10, size=(10, 2)) fig,ax = plt.subplots() plt.bar(data[:,0], data[:,1], align='center') plt.xticks(data[:,0],data[:,1],rotation=45) plt.yticks(data[:,0],data[:,1]) ax.set_ylim(0,5) ax.set_xticks(data[:,0]) ax.set_yticks(data[:,1]) plt.show() A: In matplotlib you can just use ax.set_xticks([2,4]) See this post to see more.
