1. **Create a new document.** Create a new 8½" × 11" (21cm × 28cm) document for full-page graphics. For best results, set the background color to black in the Colors dialog box. 2. **Use the Hand tool to trace the first image.** Set the Hand tool to be a multistroke, and then pull the edge of the image you want to use for the thumbnail. As a guide, trace the edge of the image for the thumbnail. You can adjust the size of the image by using the Lasso tool. You can also adjust the image's contrast and brightness in the Adjustments panel (Window → Adjustments). 3. **Use the Brush tool to paint an area of black over the traced image.** Paint a black background over the traced image using the Brush tool. Then, reduce the opacity of the Brush tool's color box to about 40%. 4. **Create a layer mask.** Hold the Shift key while painting. This makes the image appear beneath the original layer of the image. Drag the Brush tool up to the layer mask icon in the Layers panel. 5. **Use the Pen tool to add an additional drawing to the image.** Create a new path of a few points by pressing the Pen tool and creating a few points, and then color it black to make it slightly transparent. 6. **Paint over the path with the Brush tool.** Paint the black shape in the black background with the Brush tool and reduce the opacity of the brush to lessen the color's impact. 7. **Use the Rectangle tool to draw a box for the photo, and then color it black.** Draw a rectangle over the thumbnail and color it black. 8. **Copy the thumbnail in the Library.** Select the thumbnail layer and make a copy by pressing Ctrl+J (+J on the Mac). 9. **Select the other thumbnail and paste it in the new thumbnail image area (Window → Images).** The pasted thumbnail should appear below the first one. 10. **Move the thumbnail image below the black rectangle by dragging it to the left or right.** Now the thumbnails appear to be set below the rectangle with the black background. 11. **Return the thumbnail to its original position.**

and the 2014 BitGold bear market. I think the most credible Bitcoin history goes from Satoshi Nakamoto to the first exchange in 2010 (2010-11-30) to the release of the paper describing Bitcoin (satoshi.org/sats/bitcoindesign.pdf). Fast forward in 2016, we saw a boom around the 500BCH mark. This is when the first exchanges appeared on line, which added in the P2P transaction anonymity (tor). The distribution of the 1.1.0 release is between Oct 10, 2010 and Jan 28, 2011. Since it is a one year period (divided by 12 months), we get an average volatility of 33.5% per month. Let's call that number a rough estimate, we'll have to refine it later. The two main problems with it are the first one is that it is not limited to the amount of BCH because the price of the BCH is currently pegged to \$USD/BTC (or BTC/USD). The 2nd one is that we don't have any real historic data before the 1.1.0 release, so we don't have an average price from the launch of Bitcoin. Considering that the price graph of Bitcoin Cash since its 2.1.2 fork still use the price of Bitcoin (10/11/2010), it is fair to use the same average for the average volatility of Bitcoin Cash. Then we end up with an average volatility of Bitcoin Cash in July 2010 of around 3.9% per month, which is a 20% per year! But how do we compare to the Bitcoin price graph from MtGox? The MtGox price graph since 1/2/2011 is used to calculate the average price of Bitcoin, so let's use the bitcoin price graph from GDAX and BitcoinCash.com for the same period, we are going to use the 1.1.0 to 1.3.0 period from oct/2010 to dec/2010 as the base of calculation for the BTC and BCH (see the graph below). That means we have a graph with 10 months, which is a period of time where the price of the Bitcoin and Bitcoin Cash is stable (not down) in US dollars. To compute the average volatility of the Bitcoin and Bitcoin Cash in that period of time, we have to remove the spikes of volatility a681f4349c

Michael D'Antonio is author of the new book, "Never Enough: Donald Trump and the Pursuit of Success" (St. Martin's Press). The opinions expressed in this commentary are his. View more opinion articles on CNN. (CNN) President Donald Trump loves to talk about winning, but for much of his first three years in office he was losing. For a New Yorker, his frustration at a losing streak becomes something far more grievous than if his guests had lost money. If the man has a piece of you, it is nearly impossible to claw back. As Michael D'Antonio writes in his new book, "Never Enough: Donald Trump and the Pursuit of Success," Trump's striving to achieve every success that he lands becomes almost insatiable. Trump is thrilled if he can rebrand himself on the boards of Fortune 500 companies. He relishes the plaudits and the headlines that are part of being the first businessman to enter the White House. But the second he lands on the circuit, he wants more. His response to being dismissed was, as Bill Clinton told George Stephanopoulos on ABC's "This Week" in September 2017: "It's not about me. It's about what's going on with our country." We have a President who had six months to learn that lesson -- twice in the election, and again after his victory -- but did not. GDN: Android - Future of Google Directory Numbering - mqt ===== cmelbye I'm probably in the minority here, but I don't like the idea of Google collecting all my information (location, whatever else I'm using, etc) just to make it easier to find the phone numbers I need. ---- mynameishere Let's do a thought experiment: A non-unionized workforce, all prone to giving their employer "fair and free" labor, colludes with a nation-wide monopoly (okay, it's really not a monopoly but it's nearly so) to restructure industries and the standard of living in a way that everyone is better off than they were before. Will it be antitrust? Probably not...somebody goes to jail over this, and there's no real-world reason (granted, the proposed damages are staggering and being rational is hard)...no, but does anybody really think that Google's LESS free labor would be better than Bing's or AskJeeves'? If you think that Google's data should not be used to inject ads, change your DNS settings, serve better search results, etc, your opinion is irrelevant. Very little of this data is transparently collected and used, and so it should be. If someone else uses it in a way that you don't like, get to know them better. If you don't like them, sue their ass. ----- mynameishere It'll probably be the most average phone number, like 666-555-9999. Integrated circuits are often made up of millions of active devices such as transistors and capacitors. These devices are initially isolated from each other but are later interconnected together to form functional circuits. The quality of the interconnection or the "kink" in the electrical performance of the integrated circuit affects the performance of the circuit. Kinks are introduced into an interconnection of the integrated circuit because they are caused by molecular diffusion of dopants in the interconnection layers. Kinks greatly influence the performance of the circuit. For example, because of the influence of the kink, the resistance of the interconnection changes during the operation of the circuit. One
