In this book, Photoshop is addressed at an intermediate level, as well as basic levels, so that readers can use it proficiently and easily. This book doesn't use 3D software, such as Autodesk 3ds Max, so it has to be assumed that you know Photoshop or can teach yourself the basics of Photoshop, such as creating layers and arranging a document in a basic grid. This book is very hands-on and practical, so the following sections give you a good idea of how to use Photoshop.

Knowing Your Way Around Photoshop The following sections are indispensable when working with Photoshop.

Creating Layers The layer system enables you to edit an image in a multitude of ways. Each time you modify an image in Photoshop, you start a new layer. You can create an image in layers, make changes, and delete layers to create a new image without disturbing a previous layer. Layers are a means of creating a type of virtual tabletop. All the editing or manipulations you make to a layer are done on that single layer. If you want to do something different to the layer at some point, then you delete that layer and create a new one to apply the edits. The end result of all this is a product image that is just as you want it, not as it was before you started editing it.

May 14, 1991. 1 Before KENNEDY and NATHANIEL R. JONES, Circuit Judges, and JOINER, Senior District Judge.* ORDER 2 Joseph Gonzalez and Enyce Gonzalez, pro se, appeal the district court's order of July 28, 1990, granting Robert Vazquez's Fed.R.Civ.P. 60(b) motion for reconsideration of its order of January 31, 1990, denying Vazquez's motion for summary judgment. Their motion for appointment of counsel and monetary sanctions against Vazquez was also denied. This case has been referred to a panel of the court pursuant to Rule 9(a), Rules of the Sixth Circuit. Line array loudspeaker A line array loudspeaker is one of the types of loudspeakers, and is an array of loudspeakers that is at least several feet long. Line array loudspeakers have been used to create convincing acoustic "images" of full-length or lengthy recorded material. A line array is a long set of woofer drivers of different lengths that is aimed at a listener. The sound is passed through a diffraction grid, usually of triangular shape and made of plastic, to ensure that the dispersion pattern will have some "focus" towards the target, and will be smooth over its entire length. Sound comes from a power amplifier and is fed into the woofers. Each driver is driven to maximum displacement, and a woofer horn of appropriate size is used to direct the sound towards the listener. The woofers can be as close as a foot from the listener or as far away as 100 feet or more. Each driver can be mounted in such a way that the woofer cone can be adjusted with equal precision throughout the array, so that it will have perfect dispersion. The sound is sent through the diffraction grid, and a microphone can be used to measure how well the sound disperses, and also its quality. The positive-displacement woofers are similar to those used with bulletins and disc-type speakers. The negative-displacement woofers, however, are smaller in size than the positive-displacement drivers, as they are used for large-displacement speakers. The negative-displacement drivers can be as small as 6" but they are generally preferred for their higher efficiency. Line array speakers are sometimes confused with convex line arrays, and with diffraction grids and acoustic horns.
