I'm testing a project on linux and I'm not getting the same results. I have a process with the proper permissions for /tmp/spine.php but I'm not seeing anything get written. Do I need /proc/\$pid/spine? A: In laravel version 4.2, there is no need to set APP_DEBUG and APP_DEBUG_CONTROLLER in your.env file. Low-dose paclitaxel as a pretreatment before partial chemoradiation in patients with squamous cell carcinoma of the head and neck. This study evaluated the efficacy and safety of paclitaxel administered in a low-dose regimen as a pretreatment before partial chemoradiation in patients with locally advanced squamous cell carcinoma of the head and neck (SCCHN). This is an open-label, phase 2, multicenter study. Patients with locally advanced SCCHN received one cycle of paclitaxel (90 mg/m²) intravenously 3 weeks before receiving 50 Gy with paclitaxel and cisplatin. Forty-five patients were enrolled. The majority of the patients had stage III or IV disease (82%). Eight patients (17%) were unevaluable for response, and another four patients did not receive treatment after paclitaxel. The median duration of paclitaxel was 168 hours (range, 133-336 hours). Two of the four nonresponding patients had radiologically demonstrable stable disease after cycle 1, and the remaining two had progression. The objective response rate was 33% (95% confidence interval [CI] = 16%-53%). A total of 26% of the patients had a complete response, and 15% had a partial response. Four (10%) of 42 patients had disease progression. The median follow-up was 22 months (range, 8-37 months). The median progression-free survival was 11 months (95% CI = 9-19 months), and the median overall survival was not reached. Grade 3/4 toxicity included hematologic toxicity in 16 patients (38%), including grade 3/4 neutropenia in 11 (26%) and anemia in nine (21%) patients. Paclitaxel as a pretreatment before partial chemoradiation in this study was well tolerated and was associated with an encouraging objective response rate. Chromosomal localization of the alpha 2A- and beta 2-adrenergic receptors in man. Using G-banding of human metaphase chromosomes we demonstrated and mapped the chromosomal loci for the adrenergic alpha 2A-receptor, and the beta 2-receptor subtypes to the short arm of chromosome 3 and the long arm of chromosome 8, respectively. These results are in agreement with the observations of others, who showed the nucleotide sequences for these two receptors to have a high degree of homology. Method for production of Tiber
