## Sample Modeling The Saxophones V1.1.1 Incl 23 \_BEST\_

A: I think this is right: `import sys,os version_major=3 version_minor=0 print(sys.version) print(os.getfile(os.path.split(__file__)[0])[:-4])` The `os.path.split(__file__)[0]` will give you the filename of the current script. If you rename it, this should update correctly. Then you can just use the built-in string methods to get your version and number.

Punta Ballena Punta Ballena is a small cay located on the coast of central Panama. It is bounded on the north by the Panamanian island of Coiba, on the west by the estuarine arm of the Ocoa Canal, on the east by the Pacific Ocean, and on the south by Bahía de Chinchorro. It is a public sector area, and the Department of Environment and Natural Resources does have a park there, with hiking trails through the islands that offer good views of the Caribbean. There is a lighthouse and a marina there, as well as an off-shore wind farm. There are also a few beaches, and the lack of a road makes the cay easy to explore by boat. The main settlement on the cay is called Punta Ballena, although there are smaller communities in the area named Boca de Tigre, Saona, and Las Rocas. After the game, the group runs down the road to the school's bar for pizza and conversation. Our camp director, Brock, talks some more about the project and the importance of sharing ourselves with people from other countries. Some of them watch a video of a presentation that one of the campers gave, in order to understand some of the topics more. One of the videos showed a man from India talking about his experiences here, and how he'd been impacted by living here. We go to the movies after this, which is a pretty big step. It's not every day that the campers from the four countries are sitting together, watching a movie and eating pizza. But the group makes a comfortable atmosphere, and one of the American girls feels
