Kraljevstvo hazara Kraljevstvo hazara dejan lucic skits. java applet. Manual woodworkers. Teorija Zavere's latest book published in j.Q: Using dynamic array of c++ I have a struct declared as: struct Point{ float x,y; }; typedef struct Point points[4]; points[0].x=1.0f; points[0].y=2.0f; points[1].x=1.0f; points[1].y=2.0f; points[2].x=1.0f; points[2].y=2.0f; points[3].x=1.0f; points[3].y=2.0f; A pointer to this struct will point to the first element of the points array. I define an array of four pointers like this: points\* ptr2 = (points\*) malloc(sizeof(points)); The problem is that when I try to access the elements like this: ptr2[0].x = 1.0f; it gives me segmentation fault. What am I doing wrong? A: Based on the code you posted, you are not doing anything wrong. The problem is that you are not initializing the fields in the struct. In the lines: points[0].x=1.0f; points[0].y=2.0f; points[1].x=1.0f; points[1].y=2.0f; points[2].x=1.0f; points[2].y=2.0f; points[3].x=1.0f; points[3].y=2.0f; you have to initialize the fields with values, e.g. points[0].x = 1.0f; points[0].y = 2.0f; points[1].x = 1.0f; points[1].y = 2.0f; points[2].x = 1.0f; points[2].y = 2.0f; points[3].x = 1.0f; points[3].y = 2.0f;
