iPhone XWhat's new in Adobe Edge Animate 2.0.1 Welcome to the new
Adobe Edge Animate 2.0.1, which helps you bring 3D character design
to life for video or design for print. Make a finger puppet or build a
muscle buddy. Edge Animate 2.0.1 also gives you 3D artwork, video,
and text tools to enable you to develop more realistic and engaging
animations. You can design, animate, and render for web, mobile,
print, and other visual platforms. Edge Animate 2.0.1 includes new
tools to help you create better animations, such as the ability to edit a
video clip and apply 3D properties like lighting and motion to a particle.
Improved desktop and mobile performance Work faster in the desktop
version with improvements to the app to help speed up the interaction
with your content, reduce memory usage, and provide better
performance. Extensibility Enhance your workflow by developing
extensions for new features. New and enhanced effects and behaviors
Let you create animations that respond to input. Use particle effects to
create a firework show. New features include: Create layered
documents that define points to move and rotate objects, as well as
property information and a set of properties, adjustments, and actions
for editing and animating layered content. Set the rotation and position
of any layer in a document and add or remove layers. Show the
selected layer in a viewport. Use layers to group elements into a scene
and define how those elements are displayed in a viewport, such as
being stacked. Create a grease pencil tool that lets you use annotate
the 3D model, set the properties of a 3D layer, and preview the 3D
layers in a viewport. Integrate your animations with native-app-based
workflow Inline camera capture Live video playback and recording from
a camera plugin, such as the top-quality FpsMotion 2.0. Display
markers on the 3D model to let you track the objects in the scene and
to make it easier to see the geometry in the scene. Use marker-
replacement mode to automatically replace markers when you add or
modify the 3D model. The target is displayed in the workspace and in
the timeline, and its position is automatically adjusted. The target
works when you are using renderers in 2D and in 3D viewports. Use the
target to add a video playback tracker to a 3D model. You can also use
the standalone version of Flash or QuickTime to play a video. Add
rotational properties for a selection of a 3D layer or for any 3D layer, in

which you set a direction and a degree of rotation.
