bpm studio pro 4.9.9.4 cracks link1 crack link2 crack link3 crack link4 crack link5In the last twenty-five years, the popularity of snow skiing has increased dramatically. As the ski industry has developed, many different products have been introduced for skiing and other recreational uses. There are both chairlift systems and tow line systems. Additionally, many advancements have been made in the braking or disabling mechanism which are attached to the tow rope. The typical tow rope braking system has been popular because it enables a skier to select the angle of their flight by applying a braking force at the skier's knees or ankles. The typical rope braking devices require either manual locking or automatic locking mechanisms which are fixed to one end of the tow rope. See for example the following U.S. Patents: _____ U.S. Pat. No. Inventor Issued

_____ 4,401,190 Hauer October 4, 1983 4,567,847 Wulter et al January 28, 1986 4,698,829 Hauer July 8, 1987 4,747,674 Min et al March 24, 1988 4,751,988 Altschuler et al May 25, 1988 4,850,482 Hauer July 25, 1989

_____ The disadvantage of the devices disclosed in these patents is that the user must pull a brake/release mechanism. To achieve a braking action, the user must release one hand from the tow rope and reach down to operate the brake. Accordingly, none of these devices provide for the automatic braking action which is triggered by the skier's positioning their body against a resistance. The Hauer U.S. Pat. No. 4,901,643 discloses a ski rope braking system that includes a cable or tow rope that has a bow-tie shaped brake. The brake is attached at one end of the tow rope and has a locking mechanism thereon. The other end of the tow rope has a mechanical connector. The mechanical connector is attached to a ski and as the user falls, forces are applied to the cable which releases the brake. As the skier falls, the braking force decreases since the rope is longer. The disadvantage of this device is that the user can initiate a release of their skiing experience by simply holding their tow rope against a fixed point such as a post or tree. Accordingly, no provision is made for automatic release of braking force. Another rope braking system is shown in U.S
